Product engineer · web, mobile, fintech

FOR STARTUPS AND SMALL COMPANIES

# A working app in four weeks

You need a web app, mobile app, client portal or internal tool that real users can try — without hiring a team or waiting a quarter.

## WHAT YOU GET

- A working web app (React or Angular) or mobile app (Flutter, iOS and Android), with its back end (Java or TypeScript) and database
- Login, the core flows we agree in week one, and an admin screen to run it
- Deployed to your own cloud account. Source code and documentation in your repository — you own all of it
- A handover call and two weeks of bug fixes after release

PRICE

**€4–8k**

Fixed price, agreed before we start. 50% to start, 50% on release.

## NOT INCLUDED

Brand design from scratch, app-store marketing assets, hosting costs.

| Week 1 | Weeks 2–3 | Week 4 | +2 weeks |
|---|---|---|---|
| **Scope** | **Build** | **Release** | **Fixes** |
| Flows, screens and data agreed in writing | Demo every week on a live link | Tests, deploy, handover | Bugs found after release, fixed free |

## WHY ME

I design and build web and mobile products end to end, using AI agents for the implementation and reviewing every line myself. That is why four weeks is enough.

### Start with a 15-minute call.

Tell me what you need; you get a fixed scope and price within two working days.
